### **For Immediate Release**

## **Pure Biofuels Completes Mechanical Construction**

- *Facility testing will commence in the next several weeks*
- *Full scale production targeted for July 2008*

**LOS ANGELES and LIMA, PERU (June 4, 2008)** – Pure Biofuels Corp., (OTCBB: PBOF), a Peruvian-based biodiesel corporation, today announced that it has successfully concluded mechanical completion of its primary production facility near the Port of Callao in Lima, Peru. Mechanical completion certifies the integrity of all components and confirms that they have been installed to project standards. The Company now is preparing for the testing of the Callao Port refinery, which is expected to begin the ramp up to full scale production in the third quarter, subject to the test results.

Pure Biofuels' Chairman Chris Tewell, stated, "This is a significant achievement that puts us only a few weeks away from marking the Company's transition to full scale operations as a producer of biodiesel in South America. Noteworthy is the fact that this major project was completed with more than one million man hours of construction without an accident, which we believe speaks to the quality of the operation we have put in place. Pure is now positioned to capitalize on the rapidly growing demand for environmentally cleaner and cheaper fuels, and we look forward to announcing in the coming weeks the next milestone in our development, which are the completion of testing followed by the commencement of production."

The Callao Port facility encompasses approximately 4.7 hectares (almost 12 acres) of land close to the Port of Callao and includes a mooring facility capable of receiving

Panamax vessels with two 14” underwater pipes for reception and delivery of raw materials, as well as other fuels for blending, and terminaling services. The site also sits near the La Pampilla Refinery, Peru’s largest refinery.

### **About Pure Biofuels Corporation**

Pure Biofuels is committed to becoming a leader in Latin America's rapidly emerging biofuels industry. Pure Biofuels' flagship project, the Callao Port biodiesel refinery near Lima, Peru, is scheduled to complete construction in the second quarter of 2008 and to commence full production capabilities by the third quarter of 2008. The Company believes Peru's economic growth and expansion, illustrated by recent exponential growth in foreign direct investment, and GDP growth over the last five years, adds to Peru's promise as an attractive geography for alternative fuel production and development. In addition, rating agency DBRS in 2008 assigned investment-grade credit ratings to Peru's long-term foreign and local currency debt.

Biodiesel is a clean and renewable energy source derived from vegetable oil that can be used in unmodified diesel engines. Biodiesel improves overall engine performance, is 100% compatible with existing diesel vehicles and infrastructure, and has proven reliable in over 50 million miles of road testing. Biodiesel significantly reduces harmful exhaust emissions, which contribute to global warming; is non-toxic at any level; and is the first and only fuel to have passed the Clean Air Act. The United Nations expects biofuels to account for a full 25% of world energy needs by 2025.

### **Notice Regarding Forward-Looking Statements**

This news release contains “forward-looking statements,” as that term is defined in Section 27A of the United States Securities Act of 1933, as amended, and Section 21E of the United States Securities Exchange Act of 1934, as amended. Statements in this press release which are not purely historical are forward-looking statements and include any statements regarding beliefs, plans, expectations or intentions regarding the future. Since the forward-looking statements relate to future developments, results or events, these statements are highly speculative and involve risks, uncertainties and assumptions that are difficult to assess. You should not construe any of these statements as a definitive or invariable expression of what will actually occur or result. Such forward-looking statements include, among others, the expectation and/or claim, as applicable, regarding the construction of the Callao Port refinery. Actual results could differ from those projected in any forward-looking statements due to numerous factors. Such factors include, among

others, (i) Pure Biofuels' ability to raise the necessary capital to complete construction of the biodiesel refinery on time and within budget; (ii) Pure Biofuels' ability to obtain any necessary government, regulatory or other permits or approvals; (iii) Pure Biofuels' ability to keep pace with technological advances and correctly identify and invest in the technologies that become commercially accepted; (iv) Pure Biofuels' ability to operate the biodiesel refinery, if and when construction is completed, efficiently, without work stoppages, labor disputes, equipment/mechanical break-downs, political, economic and social unrest and in compliance with new governmental regulations; (v) Pure Biofuels' ability to comply with environmental, health and safety laws; and (vi) Pure Biofuels' ability to negotiate binding agreements for the sale of biodiesel, if and when production commences. These forward-looking statements are made as of the date of this news release and the company assumes no obligation to update the forward-looking statements, or to update the reasons why actual results could differ from those projected in the forward-looking statements. Although the company believes that the beliefs, plans, expectations and intentions contained in this press release are reasonable, there can be no assurance those beliefs, plans, expectations, or intentions will prove to be accurate. Investors should consider all of the information set forth herein and should also refer to the risk factors disclosed in the company's periodic reports filed from time to time with the Securities and Exchange Commission and available at [www.sec.gov](http://www.sec.gov).
